Front Fertiliser Unit

For Accurate Fertiliser Placement when Planting

Front Fertiliser Unit

The Grimme Front Mounted Fertiliser Unit has been developed from the fertiliser placement units fitted to the Grimme Range of trailed planters. The unit mounts to the tractor front linkage and depth is controlled by the adjustable depth chains. The fertiliser is metered by stainless steel augers which are driven by the land wheel. Application rates are achieved by the selection of the varying drive/driven sprockets to give the required application rate. An agitator system in the bottom of the hopper ensures even feed to the augers. The standard hopper holds 450kg and is fitted with a flared top and top cover sheet.

1// Adjustable Depth Chains

2// Injection discs for fertiliser placement and soil retention plates

Options

- Stainless steel soil retention plates
- 200kg Hopper extension
- 4 injection tines for fertiliser
- 4 injection discs for fertiliser 500mm in diameter
- Manual shut off
- Additional depth wheel

3// Injection discs

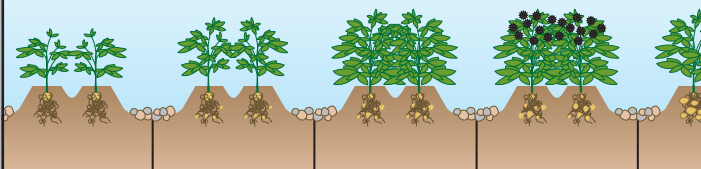

4// Additional depth wheel

5// FFU fitted with sprayer tanks
